

Rendezvous Support Letter

April 10, 2007

Dear Valued Customers:

I am writing to inform you that Rendezvous Music & Vending is working with the Redwood Coast Energy Authority (RCEA) to install energy saving devices on all of the refrigerated vending machines operated by our company on your premises.

These devices, known as VendingMisers®, can reduce the electricity used by vending machines by 10% to 50%, depending on foot traffic at the machine's location, saving money on your utility bill as well as helping to reduce greenhouse gas emissions.

VendingMisers® utilize an occupancy sensor to control the operation of the vending machine. When occupancy is sensed, the machine operates as normal. During non-occupied times (i.e. no motion has been detected for a period of 15 minutes), the controller shuts off the vending machine completely. To keep the beverage at a serviceable temperature during periods of non-occupancy, the controller monitors ambient temperature and turns the compressor on every two hours or so.

RCEA will be installing VendingMisers® throughout Humboldt County during the next three months. These devices have been extensively tested, and we do not anticipate any problems. If you would like to learn more about VendingMisers® you may contact RCEA at (707) 269-1700, or visit their web site at www.redwoodenergy.org.

While there is no cost to you for this energy efficiency improvement, RCEA may need a copy of your PG&E bill to verify the vending machine's location address and utility account information. It will be greatly appreciated if you would leave a copy of your most recent PG&E bill with someone at your front office. We thank you in advance for your cooperation.

If you have any questions or concerns regarding the installation of VendingMisers® on machines at your premises please do not hesitate to contact us.

Sincerely,

Daniel Marchetti,
President
Rendezvous Music & Vending
