## VENDING MACHINE CONTROLS REBATE APPLICATION

Dear Business Owner,

PSE is pleased to help business customers save energy and money at the facilities we serve. Did you know that a typical cold beverage vending machine on average costs \$180 per year on your electric bill? That's primarily for the electricity from the lights and the refrigeration unit. Automatic control devices, such as the VendingMiser can reduce these electricity costs by 40% or more, depending on the number of hours your machine is actively used. As a PSE electricity customer you are eligible for a \$80 rebate for each VendingMiser controller you install. To receive your rebate, simply follow the directions below.

**1. Make sure VendingMiser will work for you:**

- VendingMiser units are only designed to control cold drink vending machines dispensing non-perishable drinks. The VendingMiser should not be used with machines which dispense perishable items such as milk or ice-cream
- Vending machines can be either traditional coin-operated, "bottle drop" machines or "visa-coolers" that have sliding or pop-open doors with clear glass fronts.
- Only specially designed, weather proof VendingMiser should be used for outdoor installations.
- More product information and details about the 5-year full warranty can be found: 1) by contacting David Kunesh, Lighthouse Lighting, at 1-877-887-5483, or 2) by contacting USA Technologies 1-800-770-8539.

**2. Determine your eligibility:** Verify that PSE provides electricity at each of your locations. Note: This rebate is not available if you only purchase natural gas from PSE. To find your PSE Electric Account Number, check your PSE billing statement for each address where you plan to install units. If you have questions, contact a PSE Energy Advisor at 1-800-562-1482 (option 1).

**3. The number of rebates:** You may receive one rebate per VendingMiser installed on each of your cold drink vending machines.

**4. Complete your Application:**

- 1) Purchase and install VendingMiser. On your application, fill in columns for "initials" and date when the units were installed.
- 2) Please "sign and date" your purchase invoice to acknowledge your receipt of the units.
- 3) **Mail to Puget Sound Energy, Commercial Rebate Manager**, P.O. Box 90868, EST-10W, Bellevue, WA 98009. Please allow four to six weeks to receive rebate check from PSE.

**5. Installation:** Simple installation instructions are included with your purchase. The VendingMiser attaches to the wall or ceiling. You are responsible for proper installation. The VendingMiser should remain in place if you need to replace or upgrade your vending machine at a later date. The vending machine simply plugs into the VendingMiser.

**6. Verification:** PSE reserves the right to inspect installations to verify customer eligibility for its energy efficiency rebates.

**For information on other opportunities to help you save money, contact the PSE Energy Efficiency Hotline at 1-800-562-1482 (option 1)**
